## Attention

### SHA256 GIM client certificates

After applying patch 11.0p475 or newer, Guardium supports SHA256 GIM certificates. This has the following implications:

- If using default certificates, GIM connections are secured using SHA128. Custom certificates using SHA256 are more secure and are recommended for GIM connections.  
Note that GIM connectivity is not interrupted after applying this patch.
- GIM only verifies bundles signed with SHA256 and requires installing a transitional GIM bundle to support the change from SHA128 to SHA256.

For more information, see [Updating Guardium Data Protection GIM clients with SHA256 certificates](#).

## New features and enhancement

- **SHA256 GIM client certificates**  
Version 11.4 uses GIM certificates with SHA256. For more information, see [Updating Guardium Data Protection GIM clients with SHA256 certificates](#).
- **Support Ability to specify the age of logs processed by STAP for Hadoop with Ranger**  
Version 11.4 allow to specify age limit which will help with processing valid monitoring data and avoid duplicate or stale logs. User can now specify how far back the audit history STAP for Hadoop with Ranger will begin processing audits. This can be specified in days or hours. The previous behavior of reading from the beginning of the audit history is also available.  
This behavior can be configured using the following parameters:  
ranger\_hdfs\_age\_out\_time=  
ranger\_hdfs\_audit\_history\_length=  
This is available through GUI using patch p485.
