Interim Fix Notification on Dutch language Support for IBM Sterling B2B Integrator off 5.2.4.0

This is an IBM Service Advisory for the following:
1. Announcing support for Dutch Language on Sterling B2B Integrator 5.2.4.0.
2. Customers who are currently on 5020400 Fix Pack (and not on any iFixes) after installing this iFix jar will get the support of Dutch language for SI
3. Customers who need to support Dutch language on Sterling B2B Integrator 5.2.4.0 need to do act on this.
4. IBM recognizes you as a valued customer and remains committed to resolving any issues promptly.

Database Support:

After installing this iFix jar, Dutch Language features is supported in SI for all the databases

Restrictions Summary:

1. Customer is expected to be on SI version 5020400 without any iFixes installed
2. If customer is already on an iFix on top of 5020400 and installs this Dutch language support, then previously install iFix changes will be removed

Remediation Steps:

Remediation Method 1: Apply iFix to your B2Bi 5.2.4.0 environment
IBM has released a generally available interim fix (iFix) to support Dutch language in SI. We recommend that all Sterling B2B Integrator 5.2 who are on Fixpack 5020400 and requires Dutch Language support should download this iFix and apply it to their environment.

1) **If you are not running a customer specific iFix or hotfix**, you must apply this iFix to get Dutch language support for SI. Follow the instructions below:
a) You must already have fix pack 5.2.4.0 installed prior to applying this iFix.

b) This iFix only contains the support for Dutch Language
2. It does not contain fixes from any previous fix packs. Download the iFix (filename: si_52_build_5020400_hotfix_BR335180_335180.jar) containing the Dutch Language Support from FixCentral: http://www-933.ibm.com/support/fixcentral/

c) Install the iFix on each node in your environment. Remember that applying this iFix will require a node outage. IBM recommends that you apply iFix to your test environment first and run your regression tests against it before applying it to production.
i) For instructions on installing an iFix, see the "**Install a Hot-Fix**" section of the Sterling B2B Integrator Installation and Upgrade documentation:
http://pic.dhe.ibm.com/infocenter/sb2bi/v5r2/topic/com.ic.customization.doc/PDF_install_upgrade.html

2) **If you are running a customer specific iFix** contact your local IBM Customer Support immediately to receive an updated iFix for your specific implementation.
a) **DO NOT** install the generally available iFix from Fix Central as it will remove any individual fixes that have been provided for your implementation.
