

IBM Platform Symphony RFE 98294 Readme File

Abstract

Platform Symphony 7.1 Fix Pack 1 support for Visual Studio 2015.

Description

Currently, Platform Symphony 7.1 Fix Pack 1 supports Visual Studio 2008 and Visual Studio 2010. This fix enables Platform Symphony 7.1 Fix Pack 1 to also support Visual Studio 2015.

Readme file for: IBM® Platform Symphony
Product/Component Release: 7.1 Fix Pack 1
Fix ID: sym-7.1-build435860-welfg
Publication date: 28 December 2016
Last modified date: 28 December 2016

1. Scope

Applicability	
Operating system	Windows Server 2008 R2 64-bit
Product version	IBM Platform Symphony 7.1 Fix Pack 1

2. Installation

1. Prerequisites

- 1) To apply this fix, you must have Platform Symphony 7.1 Developer Edition installed on Windows.
- 2) This fix must be applied on Platform Symphony Developer Edition hosts.
- 3) To apply this fix, you must have Visual Studio 2015 installed on your development hosts.

2. Packages

File name	Description
symde7.1_win-x64_build435860.msp	The package that contains this fix.

3. Installation procedure

a. Before installation

Disable applications using the following command:

```
$ soamcontrol app disable all
```

b. Installation steps

Copy the `symde7.1_win-x64_build435860.msp` package to your Platform Symphony Developer Edition hosts and then do one of the following steps:

- **Interactive installation**

Double-click the Platform Symphony Developer Edition MSP package to run the Platform Symphony Developer installer.

- **Silent installation**

Run the Platform Symphony Developer installer from the command line using the following command:

```
C:\>msiexec /update <Sym_package_name_path> /l*v <Sym_install_log>  
/norestart /quiet REINSTALLMODE=omus
```

where:

- Sym_package_name_path is the fully qualified file name of the MSP package in this release.
- Sym_install_log is the log file for the Platform Symphony Developer Edition upgrade.

For example, to update a Windows 64-bit Platform Symphony Developer Edition host, run the following command:

```
C:\>msiexec /update C:\symde7.1_win-x64_build435860.msp /l*v  
updateSym.log /norestart /quiet REINSTALLMODE=omus
```

c. After installation

Enable the application using the following command:

```
$soamcontrol app enable app
```

d. Uninstalling

1) Disable applications using the following command:

```
> soamcontrol app disable all
```

2) Uninstall this fix:

You can use the Microsoft Windows Control Panel (Control Panel > Programs and Features > View installed updates) to roll back to a previous Platform Symphony package on a Windows host.

You can also use the following command to roll back Platform Symphony:

a) Get the Platform Symphony package for Platform Symphony 7.1 (for example, symde7.1_win-x64_build435860.msp in this case).

b) Use the following command to roll back Platform Symphony:

```
C:\>msiexec /uninstall <Sym_SP_path> /package <Sym_7.1_path>  
/norestart /quiet /l*v <Sym_rollback_log>
```

where:

- Sym_SP_name_path is the fully qualified file name of the MSP package in this release.
- Sym_7.1_path is the fully qualified file name of the Platform Symphony 7.1 MSI package.
- Sym_rollback_log is the log file for the Platform Symphony rollback.

3. Usage

To build a Platform Symphony sample using Visual Studio 2015, follow these steps:

1. Load one of the following files into Visual Studio 2015 and build it:

- The Application_vc120.sln solution file.
- The Application.NET64.2013.sln solution file.

These solution files are in the %SOAM_HOME%\7.1\samples\CPP\Application and %SOAM_HOME%\7.1\samples\C#\Application directories.

2. If your sample is compiled with CPP, upgrade the current Visual Studio tools by selecting the **Project** menu (or right-clicking the solution), and then selecting **Retarget solution**.

For example:

```
Upgrading project 'Common'...
```

```
Configuration 'Debug|Win32': changing Platform Toolset to 'v140' (was 'v110').
```

```
Configuration 'Debug|x64': changing Platform Toolset to 'v140' (was 'v110').
```

```
Configuration 'Release|Win32': changing Platform Toolset to 'v140' (was 'v110').
```

```
Configuration 'Release|x64': changing Platform Toolset to 'v140' (was 'v110').
```

3. If your sample is compiled with C#, modify the target framework to the .NET Framework 4.5.2.
4. Compiled binaries are placed into the following directories:
%SOAM_HOME%\7.1\samples\CPP\Application\Output\
%SOAM_HOME%\7.1\samples\C#\Application\Output\
