

Unofficial Release Notes: IBM Aspera HTTP Gateway 2.2.1

Product Released: July 21, 2021

Release Notes Updated: April 21, 2021

This release of IBM Aspera HTTP Gateway 2.2.1 allows and aligns with HTTP Gateway support in IBM Aspera on Cloud. When configured with HTTP Gateway version 2.2 or later, Aspera on Cloud organization users can transfer using HTTP Gateway. The release also provides the issue fixes, and other changes listed below.

ISSUES FIXED IN THIS RELEASE

HTTPGTW-184 - Http-gateway CPU spike on submitting on invalid transfer spec.

HTTPGTW-187 -Service fault in aspMsgHandler.

SYSTEM REQUIREMENTS

If using HTTP Gateway with IBM Aspera Faspex, HTTP Gateway requires Faspex 4.4.1 Patch Level 8 or later.

Linux: RHEL/CentOS 7-8

Note: RHEL/CentOS 6 is no longer supported as of HTTP Gateway 2.1.2.

Browsers: Edge 91, Firefox 90, Safari 14.1, Google Chrome 91

KNOWN ISSUES

HTTPGTW-172 - The `serverconfig.cors` property only supports adding one domain or the asterisk wildcard (*).

HTTPGTW-37 - Downloads suffer packet loss if the transfer rate of the HTTP leg of the transfer (HTTP Gateway and the client through HTTP/HTTPS) cannot keep up with the transfer rate of the FASP leg of the transfer (HTTP Gateway and the HSTS node through **ascp**). **Workaround:** Mitigate this issue by capping the transfer rate using the `transferconfig.cap_max_transfer_rate` setting in the `gatewayconfig.properties` file.

PRODUCT SUPPORT

For online support, go to the IBM Aspera Support site at <https://www.ibm.com/mysupport/>. To open a support case, log in with your IBMid or set up a new IBMid account
