

APAR: IV55170

Symptom: When the F5/Refresh button is used in Internet Explorer 9 browser then RaPM panels are not properly displayed.

The limitation for using F5/Refresh button in Internet Explorer 8, 9 browsers on RaPM panels needs to be documented under 'Known limitations, problems, and workarounds' section. Find below the documentation.

Documentation Changes:

Following documentation to be incorporated to IBM Security Role and Policy Modeler Infocenter under 'Browsers' section in:

Security Role and Policy Modeler > Product overview > Known limitations, problems, and workarounds

LOCATION_URL:

http://publib.boulder.ibm.com/infocenter/tivihelp/v2r1/topic/com.ibm.security.modeling.doc/ref/ref_overview_knownissues.htm

<Infocenter_Update>

Using the refresh button in the browser on the RaPM console can produce unexpected results in Internet Explorer 8, 9.

Workaround:

To resolve this problem, close the page and relaunch it from the home page. Or, in order to refresh the data the user can use refresh button provided on RaPM panels (e.g. Project Panel, Import panel, Role Panel). Or, use Mozilla Firefox as your browser option.
